

Dear candidate,

this exercise allows us to learn more about your approach in addressing any challenge and allows us to appreciate both your technical and transversal qualities. (soft skills).

WHAT DO YOU HAVE TO DO

Create an .HTML file, create an INPUT search component with Autocomplete that get data from an XMLHttpRequest call. A simple autocomplete, that's all.

Example: Autocomplete location, contacts, keywords.

The endpoint for the XMLHttpRequest call must not have server side logic, it can return a simple static JSON.

WHAT YOU HAVE TO USE

- HTML
- CSS
- VanillaJS

WHAT YOU CANNOT USE

- Frameworks (JS or CSS)

HOW WE RATE YOU

- Aesthetic sense (you won't be a designer but we'd like some aesthetic sense)
- Animations, Interaction
- Semantics, js and css organization and documentation
- Reliability and performance
- Mobile and Desktop usability, obviously cross browser (IE11 + to not drive you crazy)
- Accessibility
- Initiative and inventiveness

We thank you for your time and promise you will receive feedback on your exercise.
